U.S. DEPARTMENT OF AGRICULTURE      AGRICULTURAL MARKETING SERVICE  
 CROP REPORTING BOARD  
 WASHINGTON, D.C.

Release: December 22, 1953

12:00 Noon (E.S.T.)

## PIG CROP REPORT - DECEMBER 1953

The Crop Reporting Board of the Agricultural Marketing Service makes the following report of sows farrowing, pigs per litter, and pigs saved. This report is based upon returns from some 145,000 farmers obtained in cooperation with the Post Office Department through the rural mail carriers.

ACTING SECRETARY OF AGRICULTURE.

## PIG CROP REPORT - DECEMBER 1953

The 1953 pig crop totaled 82.1 million head, a decrease of 10 percent from a year ago, the Crop Reporting Board of Agricultural Marketing Service reported today. The spring pig crop was down 11 percent and the fall crop down 9 percent. The number of sows farrowing this fall was 9 percent smaller than last year. The number of pigs saved per litter at 6.70 is slightly above last fall and is the highest on record. The fall pig crop at 31.9 million head is the smallest fall crop since 1947. The 1953 spring pig crop totaled 50.2 million head.

For the 1954 spring pig crop, reports on breeding intentions indicate a total of 7,795,000 sows to farrow, 6 percent above the number farrowing last spring. If the intentions for spring farrowings materialize and the number of pigs saved per litter equals the 10-year average with an allowance for upward trend, the 1954 spring pig crop would be 52.0 million head. Such a crop would be 4 percent larger than last spring.

Marketings from the 1953 spring crop were quite rapid during the early fall months and at lighter weights than the previous fall. On December 1 the number of hogs over 6 months old was reported to be nearly a fifth smaller than last year.

This report is based on a survey of 145,000 farm and ranch operators. These returns were obtained largely in cooperation with the Post Office Department through rural mail carriers.

Fall Pig Crop: The number of pigs saved in the fall season of 1953 (June 1 to December 1) is estimated at 31,882,000 head. This is 3,072,000 head or 9 percent smaller than the 1952 fall crop, 13 percent below the 1942-51 average, and the smallest fall crop since 1947. Fall pig numbers are below last year in all regions. The North Atlantic States are down 12 percent; east North Central, 6 percent; west North Central, 7 percent; South Atlantic, 14 percent; South Central, 14 percent; and West, 19 percent.

The number of sows farrowing in the fall of 1953 is estimated at 4,762,000 head or 9 percent smaller than a year ago and 16 percent smaller than the 10-year average. The 1953 fall farrowings are 4 percentage points below the number that farmers' reports last June indicated would farrow. All regions except the South Central show larger decreases in fall farrowings than indicated last June. The percentages that the 1953 fall farrowings are of 1952 as now estimated and the fall intentions as reported last June are as follows: North Atlantic, 82 percent now and 91 percent last June; east North Central, 94 and 100; west North Central, 93 and 99; South Atlantic, 83 and 88; South Central, 84 and 78; and West, 80 and 82.

The number of pigs saved per litter at 6.70 is the highest on record for the fall pig crop, exceeding the previous fall high of 6.65 pigs saved in 1950 and 1952. Weather conditions during the peak fall farrowing months were generally favorable, and attractive hog prices encouraged better care.

Compared with a year earlier, the monthly distribution of farrowings in the 1953 fall season shows a larger percentage of litters in July, August and November and smaller percentages in June, September and October. The percentage of sows farrowing each month during the fall season compared with the same month in 1952 is as follows: June 1953, 14.4 percent compared with 15.4 percent in June 1952; July 13.1 compared with 12.5; August, 25.2 and 23.0; September, 27.7 and 29.6; October, 13.6 and 14.0; and November, 6.0 and 5.5.

Spring Pig Crop: The 1953 spring pig crop is now estimated at 50,237,000 pigs, 11 percent below 1952. The number of sows farrowing in the 1953 spring season totaled 7,377,000 head, 13 percent smaller than a year earlier. The number of pigs saved per litter at 6.81 was the highest on record.

Yearly Pig Crop: The combined spring and fall pig crop for 1953 is estimated at 82,119,000 head. This is 9,112,000 head or 10 percent smaller than the 1952 crop and 13 percent smaller than the 10-year average. The 1953 total pig crop is the smallest since 1940.

Spring Intentions: Farmers' reports on breeding intentions indicate 7,795,000 sows to farrow in the spring of 1954 (December 1, 1953 to June 1, 1954). This would be an increase of 3 percent from last spring, but 15 percent below the 10-year average. Compared with last year, all regions except the North Atlantic show increases. By regions, the indicated increases are as follows: east North Central, 5 percent; west North Central, 7 percent; South Atlantic, 2 percent; South Central, 8 percent; West, 9 percent. The North Atlantic region showed a decrease of 10 percent.

These estimated changes from last year are based on breeding intentions reported by farmers about December 1.

If the intentions for spring farrowings materialize and the number of pigs saved per litter equals the 10-year average with an allowance for upward trend, the 1954 spring pig crop would be about 52.0 million head. A spring crop this size would be 4 percent larger than in 1953, but 10 percent smaller than the 10-year average spring crop. For the Corn Belt, the 1954 spring crop would be 4 percent larger than last year.

Hogs Over 6 Months Old on Farms: The number of hogs over 6 months old on farms on December 1 this year was reported to be nearly a fifth below the number on December 1 last year. The early movement of the 1953 spring pig crop reflects a continuation of the tendency of recent years toward earlier farrowings. At the same time, hogs from the spring crop have been marketed at lighter weights than a year earlier. Although the 1953 spring pig crop was down 11 percent, total commercial slaughter of hogs from August through November was down only about 8 percent from the same period last year.

Sows held for 1954 spring farrowing represent a larger proportion of the December 1 inventory of hogs over 6 months old than a year ago. Thus, the December 1 supply for market represents a relatively larger decrease compared with last year than indicated by total inventories on December 1.
